

Use Hangover Helper to document those crazy nights out. You know the ones I'm talking about... the ones you can't remember but wish that you did. Don't worry, any incriminating evidence can be deleted with a simple swipe!

To get started, push **New Party** on the entry screen.

After you hit **New Party**, you are taken to the party input screen where you **select the party name text box** to name the occasion or night out. If you have a 4S, simply hit the mic button and say the name of your event! When is it? Use the date wheel, then hit the **Next** button! The **Back** button takes you back to the main screen.

On the **Party Screen**, you'll see a map where you can view your past events on the **Party List**. Use the **Mark It** button to attach a new photo or voice memo (video capability coming soon!); this will result in a breadcrumb trail of where you have been. You can document a whole night, weekend or week of any occasion and easily view the pictures you took, and where you took them, at a later date.

*If your phone is out of range or you cannot mark a location for some reason, Hangover Helper's **Mark It** feature will offer an option to attach fact location information so that you may continue to use photo and voice functionality.

On the **Location Editor** screen, hit the **Camera** button to take a new snapshot, and hit the **Memo** button to attach a new voice memo or recording.

After hitting the **Camera** button, take a picture, and make full use of all the camera functions you're used to. You may choose to insert a picture from your photo album. After snapping and adjusting your picture, you're taken back to camera screen where you may add a voice memo, as well. **To add additional photos at the same location, you must go back and hit the Mark It button again.**

Once you have selected a photo, the IMG picture will change to what you have selected on the **Location Editor** screen; this is the time to hit the **Memo** button to associate a recording or note with that image. After hitting the **Memo** button, a series of other buttons will light up to guide you to what you need to push next, and you are able to record and play back. Once you are satisfied with your recording, hit the **Done** button to save it.

To view a list of your saved parties, touch **Saved Parties** on the main screen. Touch the plus (+) sign to add additional photos, locations and memos to this saved party; this will take you to the **Mark It** screen for that party where you hit the **Mark It** button to continue adding photos and voice notes. Hitting the map button will launch a map of where you were for that party; a pin for each place you marked. If you select a pin, additional location information will display. Select the party itself to see all of the locations, images and recordings for the event. Then, select the image, map or mic icons to view all media attached to the selected party. If you want to destroy evidence, swipe to delete! A future release will let you post your photo albums to Facebook, and video is coming soon!

Enjoy! R.Jones, Developer.
